IN THE CLAIMS:

- 1. (currently amended): A door and frame <u>in</u> combination <u>with for</u> an air handling unit, the combination comprising:
 - (a) a frame;
 - (b) a hinged door engaging the frame, the door comprising a front wall, rear wall, and side walls enclosing a hollow core and insulating material filling the hollow core; and
 - (c) a gasket between the door and the frame, the gasket further comprising a flexible gasket wall with anti-roll extensions; wherein the door and frame can withstand a pressure differential of greater than about six inches of air pressure.
- 2. (original): The door and frame combination of claim 1, wherein the insulating material is expanding polyurethane foam.
- 3. (original): The door and frame combination of claim 2, wherein the side walls are two inches in width.
- 4. (original): The door and frame combination of claim 1, wherein the gasket further comprises a central hollow core.
- 5. (original): The door and frame combination of claim 1, wherein the gasket further comprises a friction-reducing material on the gasket wall.
- 6. (previously amended): The door and frame combination of claim 1, further comprising opposed thermal pockets in the door and in the frame, the thermal pockets being filled with a second insulating material.

- 7. (previously amended): The door and frame combination of claim 6, wherein the second insulating material is high-density polyurethane.
- 8. (original): The door and frame combination of claim 1, further comprising a window in the door.

- 9. (currently amended): A door and frame <u>in</u> combination <u>with</u> for an air handling unit, the combination comprising:
 - (a) a frame;
 - (b) a hinged door engaging the frame, the door further comprising a front wall, rear wall, and side walls enclosing a hollow core and insulating material filling the hollow core wherein the insulating material is expanding polyurethane foam; and
 - (c) a gasket between the door and the frame, the gasket further comprising a flexible gasket wall with anti-roll extensions; wherein the door and frame can withstand a pressure differential of greater than about six inches of air pressure.
- 10. (original): The door and frame combination of claim 9, wherein the side walls are two inches in width.
- 11. (original): The door and frame combination of claim 9, wherein the gasket further comprises a central hollow core.
- 12. (original): The door and frame combination of claim 9, wherein the gasket further comprises a friction-reducing material on the gasket wall.
- 13. (previously amended): The door and frame combination of claim 9, further comprising opposed thermal pockets in the door and in the frame, the thermal pockets being filled with a second insulating material.
- 14. (previously amended): The door and frame combination of claim 13, wherein the second insulating material is high-density polyurethane.

15. (original): The door and frame combination of claim 9, further comprising a window in the door.

- 16. (currently amended): A door and frame <u>in</u> combination <u>with</u> for an air handling unit, the combination comprising:
 - (a) a frame;
 - (b) a hinged door engaging the frame, the door further comprising a front wall, real wall, and side walls enclosing a hollow core and insulating material filling the hollow core; wherein the insulating material is expanding polyurethane foam; and
 - (c) a gasket between the door and the frame, the gasket further comprising a flexible gasket wall with anti-roll extensions, and further comprising a friction reducing material on the gasket wall; and
 - (d) opposed thermal pockets in the door and in the frame, the thermal pockets being filled with high-density polyurethane.

 wherein the door and frame can withstand a pressure differential of greater than about six inches of air pressure.
- 17. (original): The door and frame combination of claim 16 wherein the gasket further comprises a central hollow core.
 - 18. (canceled)
- 19. (original): The door and frame combination of claim 16, further comprising a window in the door.
- 20. (original): The door and frame combination of claim 16, wherein the side walls are two inches in width.

21. (currently amended) A door and frame in combination with for an air handling unit, wherein the door and frame can withstand a pressure differential of greater than about six inches of air pressure.
